Syntax Notes: 1 If either NM108 or NM109 is present, then the other is required.

2 If NM111 is present, then NM110 is required.

**Semantic Notes:** 1 NM102 qualifies NM103.

**Comments:** 1 NM110 and NM111 further define the type of entity in NM101.

Notes: 1. Use this NM1 loop only to identify the organizations and individuals associated with the business process of submitting the grant application. Use the 2/NM1/340 segment to identify project personnel.

- 2. At least 3 iterations of this NM1 loop are REQUIRED using NM101 code BY to identify the Federal Agency to receive the application, code SE to identify the grant applicant organization, and code 1B to identify the applicant organization authorizing individual. Use the PER segment to identify the Federal Agency point of contact associated with code BY.
- 3. Whenever possible, identify the organization using only a qualifier and number in NM108/09 and the appropriate codes in NM101/02. The organization's full address was established at the time of registration as a Federal Government trading partner. Where no qualified number is available, specify the organization's name in the NM103 (and N2 as needed) and the full address in N3-N4.

Segment: **HL** Hierarchical Level

**Position:** 010

**Loop:** HL Mandatory

Level: Detail
Usage: Mandatory

Max Use: 1

Purpose: To identify dependencies among and the content of hierarchically related groups of

data segments

Syntax Notes: Semantic Notes:

**Comments:** 

- 1 The HL segment is used to identify levels of detail information using a hierarchical structure, such as relating line-item data to shipment data, and packaging data to line-item data.
- 2 HL01 shall contain a unique alphanumeric number for each occurrence of the HL segment in the transaction set. For example, HL01 could be used to indicate the number of occurrences of the HL segment, in which case the value of HL01 would be "1" for the initial HL segment and would be incremented by one in each subsequent HL segment within the transaction.
- 3 HL02 identifies the hierarchical ID number of the HL segment to which the current HL segment is subordinate.
- 4 HL03 indicates the context of the series of segments following the current HL segment up to the next occurrence of an HL segment in the transaction. For example, HL03 is used to indicate that subsequent segments in the HL loop form a logical grouping of data referring to shipment, order, or item-level information.
- 5 HL04 indicates whether or not there are subordinate (or child) HL segments related to the current HL segment.

**Notes:** 

- 1. Use this HL loop to identify project organization, personnel, technical data, and budget data associated with the application.
- 2. The transaction set hierarchy as defined by this HL loop shall be:
  - a. The Project loop shall be the first iteration of the HL loop.
  - b. The Project loop may have a single subordinate Previous Award (IB) loop.
- c. The Project loop may have any number of subordinate Sub-project (SP), Consortium (CO), Key Person (26), human subject Care Group (4), or Animal Subject (AS) loops.
- d. Sub-project and Consortium loops may have any number of subordinate Sub-project, Consortium, Key Person, human subject Care Group, or Animal Subject loops.
- e. Key Person loops may have any number of subordinate Other Support (OS) loops.
- f. Care Group loops may have any number of subordinate medical Procedure (PD) loops.
- g. Animal Subject loops may have any number of subordinate Animal Subject loops, but only if the subordinate loop contains a subset of animals of the same species.

3. The term "project" in the following implementation notes is used generically to identify dates, quantities, etc. related to the Project and subordinate Sub-projects and/or Consortiums. The terms "Project loop", "Sub-project loop", and "Consortium loop" are not interchangeable. They are used to distinguish between the efforts and to establish the precise hierarchical relationship between them.

- 3. For purposes of this IC, cells will be identified in a manner typical of computer spreadsheets. That is, the columns will be identified by a letter A, B, C ... and the rows by a number 1, 2, 3 ... The column and row titles (text descriptions) are REQUIRED to be included in the matrix. In specifying ranges it is not necessary to specify a continuous series of cells within a row or column; they can be broken into subsets. However, when all iterations of the INX loop are complete, the entire matrix should be complete.
